Protective Clothing

## Your First Choice for PPE<sup>SM</sup>

Potential dangers abound when work is being done outdoors. Vehicles and other equipment moving at various speeds pass by workers constantly. Visibility problems are the cause for many of the deaths and injuries that happen when workers are struck by vehicles or other mobile equipment. High-visibility apparel often serves as a first line of defense to protect workers in these situations.

The U.S. Occupational Safety and Health Administration (OSHA) requires employers to outfit employees with "reflectorized and highly visible material to enhance worker safety". And the U.S. Department of Transportation's manual for Uniform Traffic Control Devices specifies high-visibility clothing for flaggers, law enforcement officers and others involved in managing work zone traffic.

MCR Safety, a member of the International Safety Equipment Association (ISEA), is committed to providing workers the very best in high-visibility apparel. The ANSI/ISEA 107-2004 establishes a set of performance criteria for high-visibility apparel.

Should you need assistance in determining the most appropriate garment for any application, please contact MCR Safety or ISEA (www.safetysafety.org). ISEA is the national trade association for suppliers of safety and personal protective equipment. ISEA is dedicated to protecting the health and safety of all workers through the development of workplace standards and the education of users on safe work practices. ISEA developed and published this standard and any requests for interpretation should be referred to ISEA.
